

Mazuri Update: WILD HERBIVORE 5ZF1 and 5V05

Wild Herbivore diets 5ZF1 and 5V05 are the latest rave in herbivore feeding. 5ZF1 is a pellet while 5V05 is a cube size product. The Wild Herbivore diets are virtually starch free, containing less than 4% starch and contain high levels of Omega 3 Fatty Acids. The diet is made with Flaxseed and Aspen. Many zoos are replacing their ADF 16, ADF 25, Browser diets, and Moose diets with the Wild Herbivore option and are seeing lower incidence of acidosis and corrected Ca:P ratios in their animals. The 5ZF1 is also available with Ivermectin. We encourage those customers currently using the ADF 16 with Ivermectin to switch to the Wild Herbivore with Ivermectin, product code 5ZF12.
